SPORTING ARMS

A Trusty
Introducing The

Taking a rifle out into the woods is a pleasure that's just not enjoyed enough anymore.

Perhaps that's because a handy, comfortable-to-carry, woods rifle hasn't been available for decades. Action Arms' new Timber Wolf has changed all that. Here again is the well balanced, offhand rifle that rides at one's side, almost weightlessly, throughout a leisurely walk under a forest canopy.

The Classic Woods Rifle — Revisited.

The new Timber Wolf brings together a combination of the style and features of slide-action rifles of an earlier era: A time when quality and workmanship were hallmarks of firearms manufacturing. It was also a time when life's pace allowed sportsmen a relaxed afternoon of "woods loafing."

Although the era is long past, the Timber Wolf brings back the comfortable feeling of carrying a fine handling, companion rifle.

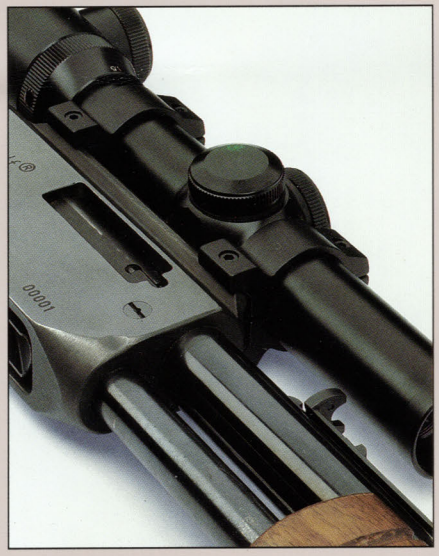
The New Timber Wolf makes a great companion for your favorite revolver.

The Timber Wolf chambers virtually every popular .357 Magnum or .38 Special round.

Chambered in the popular .357 Magnum cartridge, this slide-action carbine is light weight, and it takes down to be even easier to pack along. Its carbine-length barrel squeezes every bit of performance out of any magnum load and it's just over 18 inches long.

Sidekick
New Timber Wolf.

Classic looks don't compromise modern technology and features.



Integral scope mounts provide easy mounting of any scope with Action or any "weaver-type" rings.

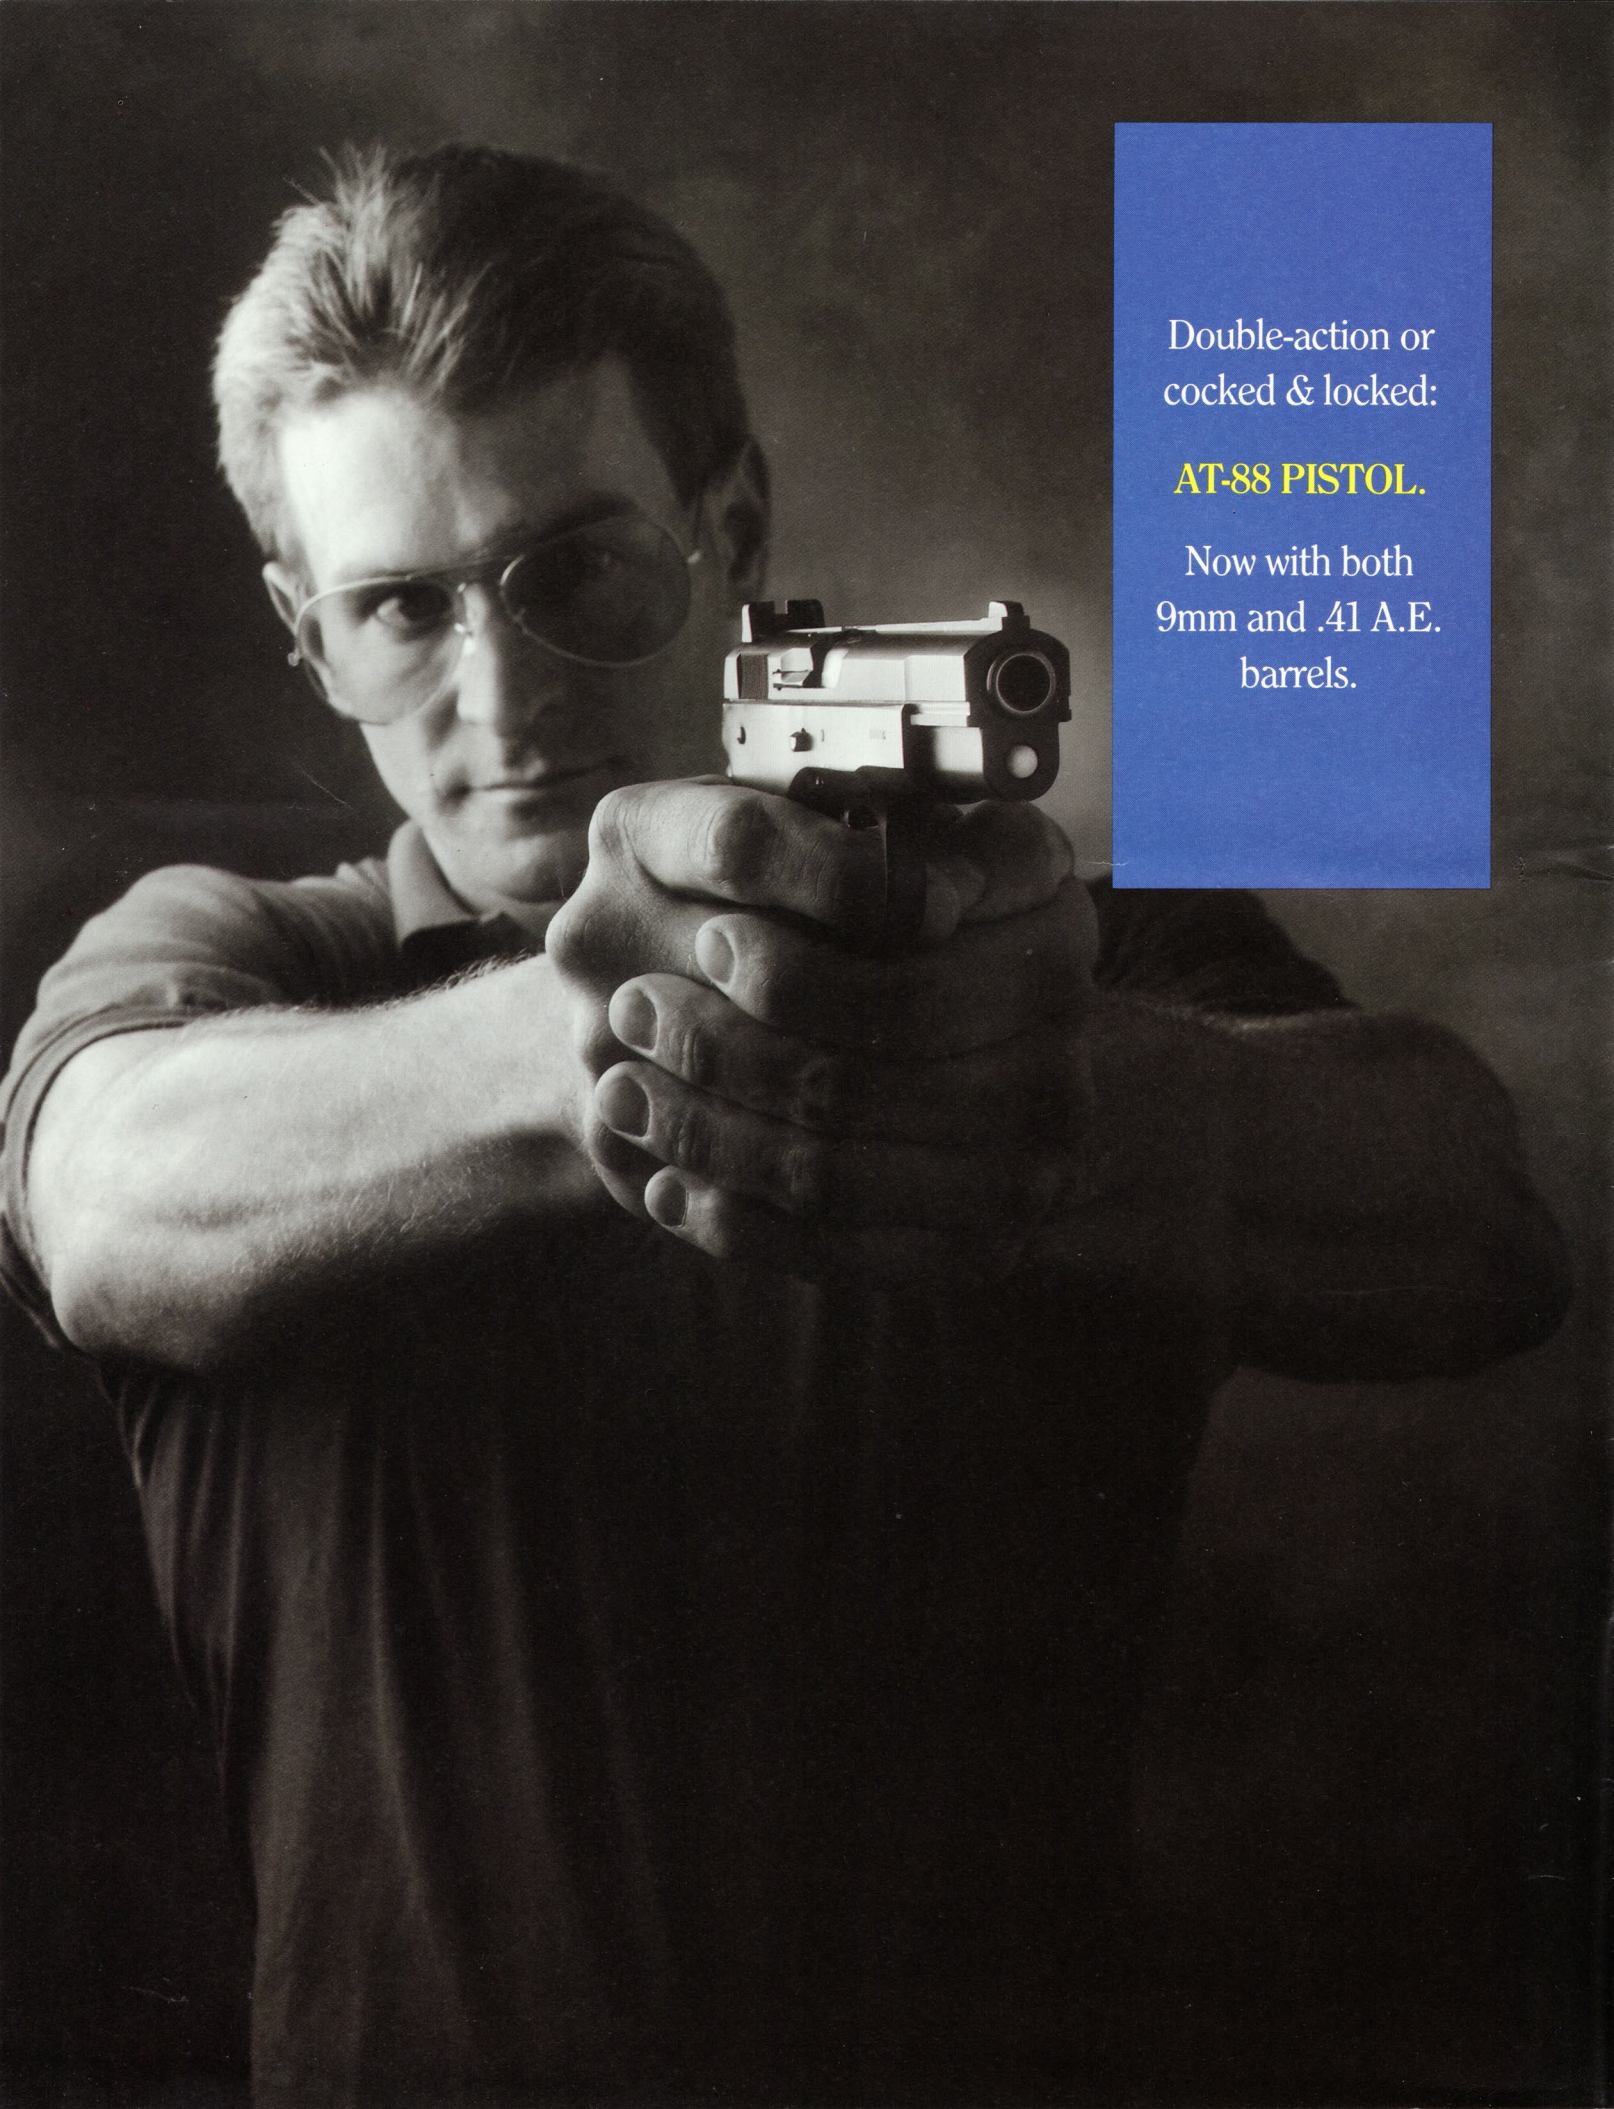
The Timber Wolf's slim lines and walnut stock are reminiscent of a bygone era, but features like integral scope bases and a sear-locking safety assure that this is a rifle for today. Naturally, open iron sights are included. The milled receiver and barrel meet the same rigid specifications Israel Military Industries builds into all of their firearms, including the legendary UZI.®

Your next rifle ought to be one you'll want to shoot a lot.

The Timber Wolf is fun to shoot. It shoots .38 Special or .357 Magnum, and it is as much at home on an indoor range as it is in the woods. It takes down and is easy to carry.

Conveniently located on the trigger guard, the easy-to-operate safety locks both the trigger and the sear.

Weighing only around five and a half pounds, the Timber Wolf has all of the features that make a rifle a classic. Ask to see one, feel its balance, and find out for yourself.



Double-action or cocked & locked:

AT-88 PISTOL.

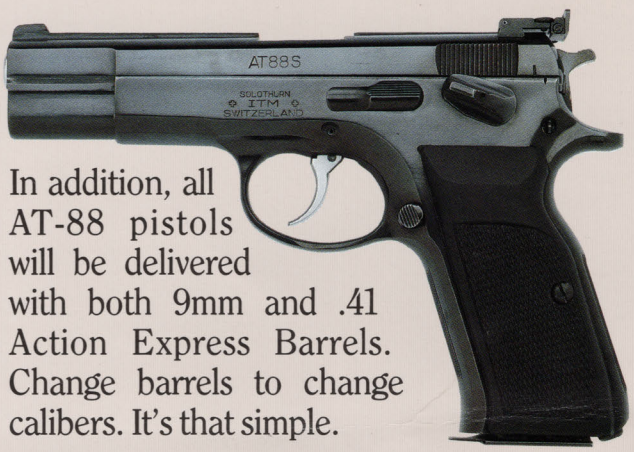
Now with both 9mm and .41 A.E. barrels.

All of the advantages in one pistol.

The AT-88S: full-sized and full-featured.

This model offers a combination of quality and features no other pistol can match. This year, all AT-88's have an ambidextrous safety which also blocks the firing pin. Here's a service pistol that's ready for target shooting without extensive modification.

Of course, the full-sized AT-88S has the ability to be carried cocked and locked or in the double action mode at the owner's discretion.

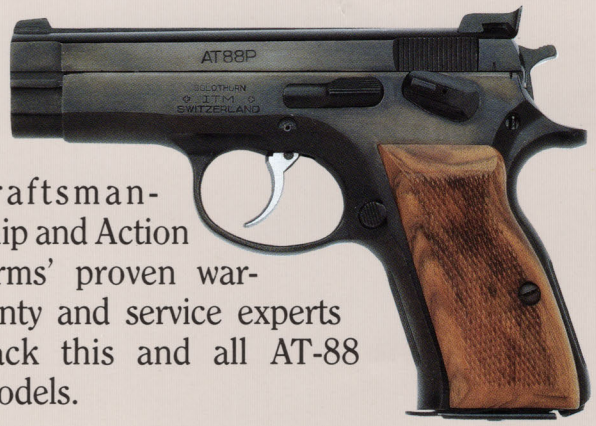


In addition, all AT-88 pistols will be delivered with both 9mm and .41 Action Express Barrels. Change barrels to change calibers. It's that simple.

The AT-88P: more compact, but fully loaded.

For more comfortable carry, the AT-88P offers all of the features of the full-sized model. Nearly 1″ shorter, it still packs a 14 round capacity.

The AT-88P has the same fine, blued finish as the full-sized model as well as checkered walnut grips. It also comes with both a 9mm and .41 Action Express barrel. Precise

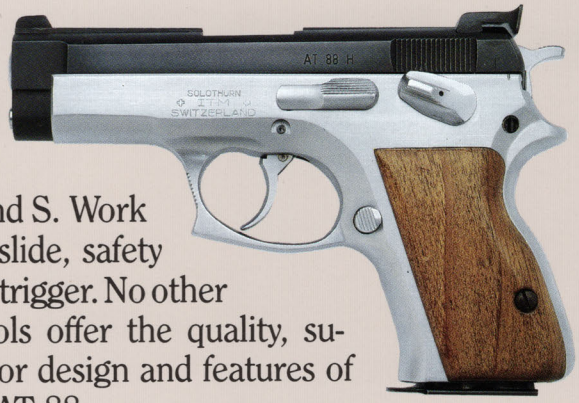


craftsmanship and Action Arms' proven warranty and service experts back this and all AT-88 models.

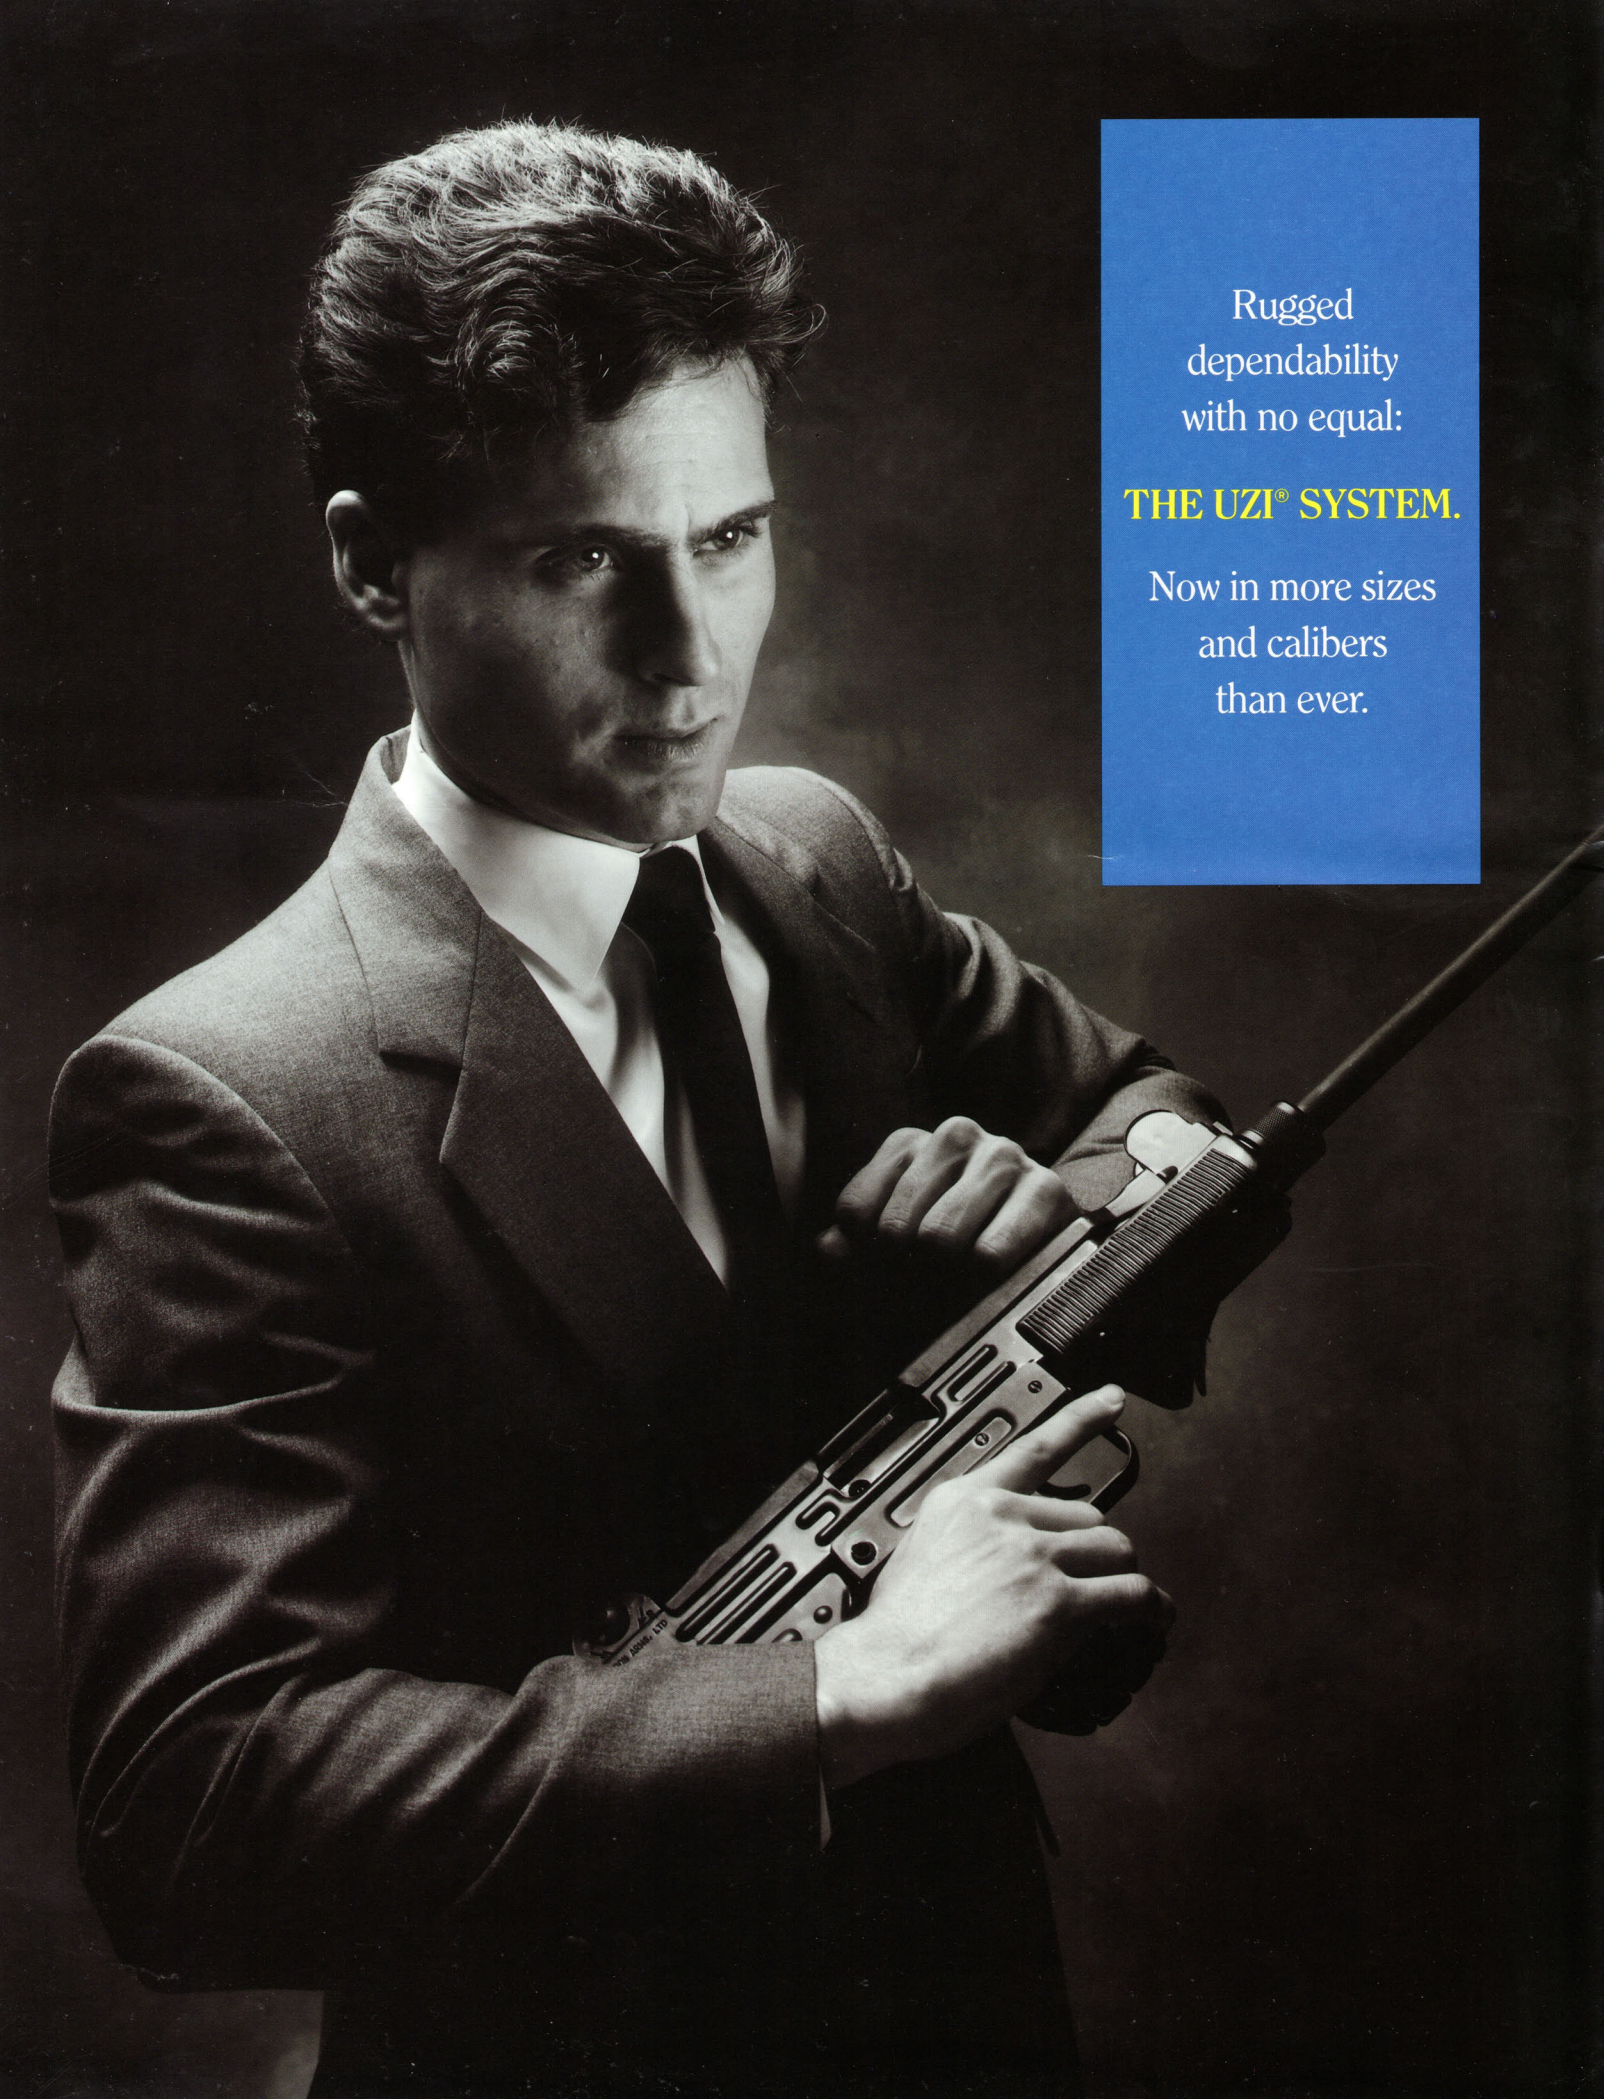
The AT-88H: a pocket full of performance.

The smallest AT-88 ever made, the Model H retains all the advantages of the AT-88 system. Choice of carry, both calibers, ambidextrous safety and firing pin lock in a true pocket-sized pistol.

This tiny pistol still offers the capacity to carry eleven 9mm rounds or eight .41 Action Express rounds. Ask to see the new AT-88H,



P and S. Work the slide, safety and trigger. No other pistols offer the quality, superior design and features of the AT-88.



Rugged
dependability
with no equal:
THE UZI® SYSTEM.
Now in more sizes
and calibers
than ever.

Legendary Ruggedness and Performance.

The UZI Carbine: the benchmark.

This is the design that set the standard. The UZI's performance under the harshest conditions made it the world's most respected carbine.

Now, UZI performance is available in 3 calibers: the original 9mm, the proven .45 ACP and the powerful new .41 Action Express. In addition, there is even a .22 LR conversion kit available that allows shooting in range areas which can't handle normal pistol rounds.

The UZI MINI Carbine: more compact, but with full-sized UZI performance.

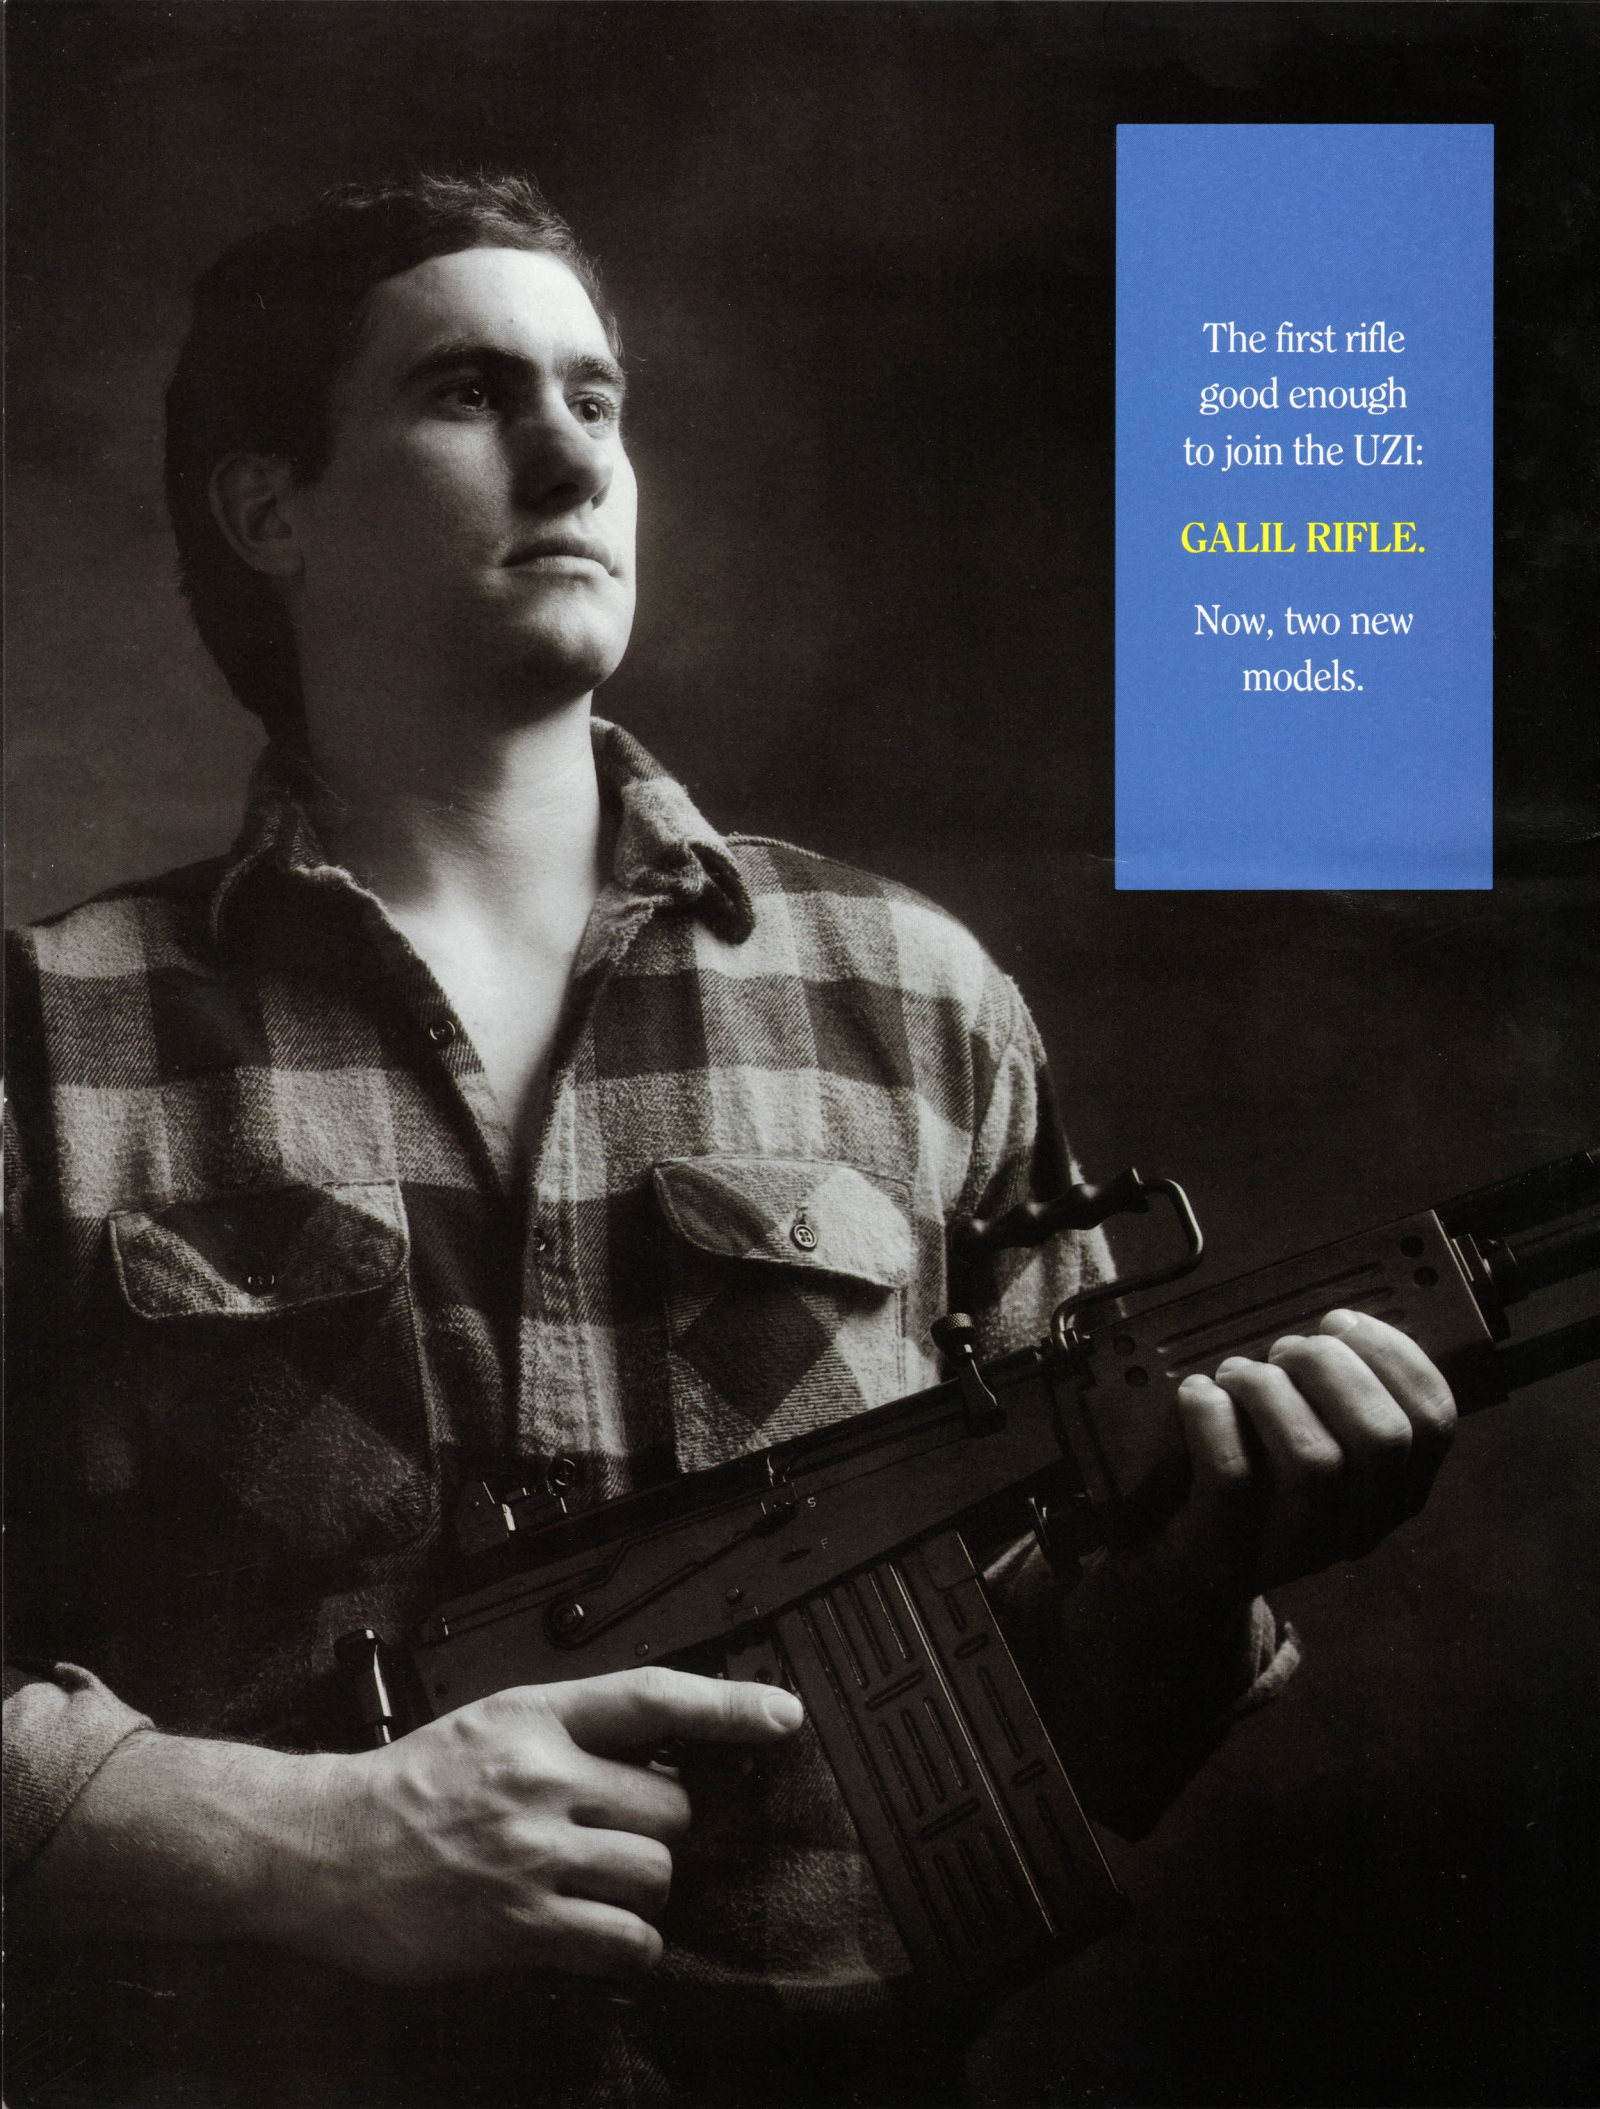
It's easy to see that the MINI Carbine is all UZI. It even uses all of the full-sized UZI magazines.

More important, the MINI Carbine is chambered in either the popular 9mm or the .41 Action Express. Select either of these cartridges and the MINI Carbine delivers a major step up in velocity, energy and accuracy compared to a handgun.

The UZI Pistol: The smallest UZI ever made.

Less than 10 inches long, the UZI Pistol offers all the quality and dependability of the full-sized model. Like all UZI models, this pistol is built to the most rigorous specifications by Israel Military Industries.

Delivered with click-adjustable pistol sights and a 20-round magazine, the UZI Pistol also uses standard UZI 25- and 32-round magazines. Choose 9mm, .45 ACP or the new .41 Action Express and get a unique pistol with unmatched magazine capacity.



The first rifle
good enough
to join the UZI:
GALIL RIFLE.
Now, two new
models.

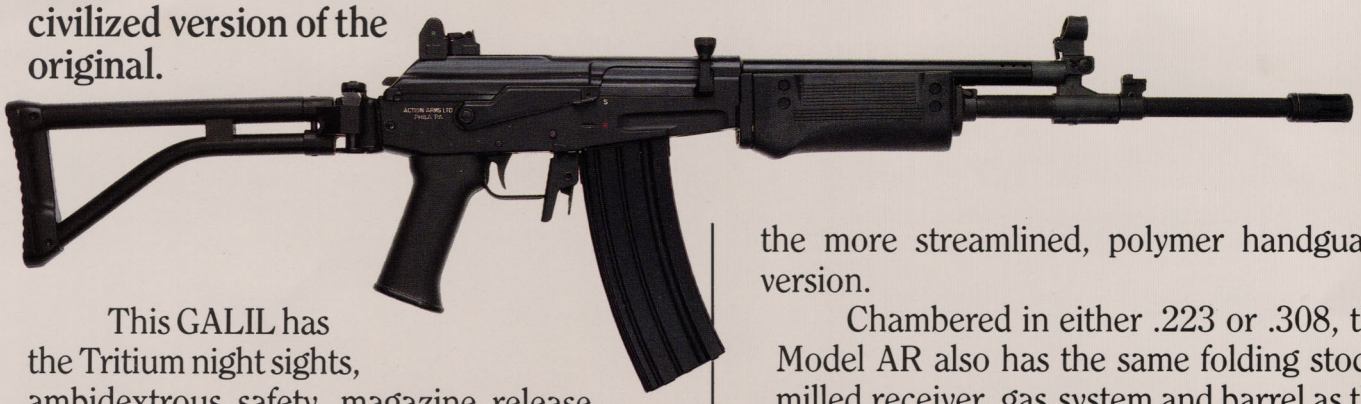
Forged in Battle.

The GALIL Model ARM: the Israel Defense Forces' primary battle rifle.

This no-compromise rifle uses advanced design and technology plus rugged simplicity to assure continued functioning under the most adverse conditions.

Just like the original, the model ARM has the exclusive, flip-up Tritium night sight system. The folding stock provides compactness, yet is completely rigid when extended. In either .223 or .308, the rifle also features a folding bipod, vented hardwood handguard, and a carrying handle.

The GALIL Model AR: a more civilized version of the original.



This GALIL has the Tritium night sights, ambidextrous safety, magazine release and cocking handle of the military model in the more streamlined, polymer handguard version.

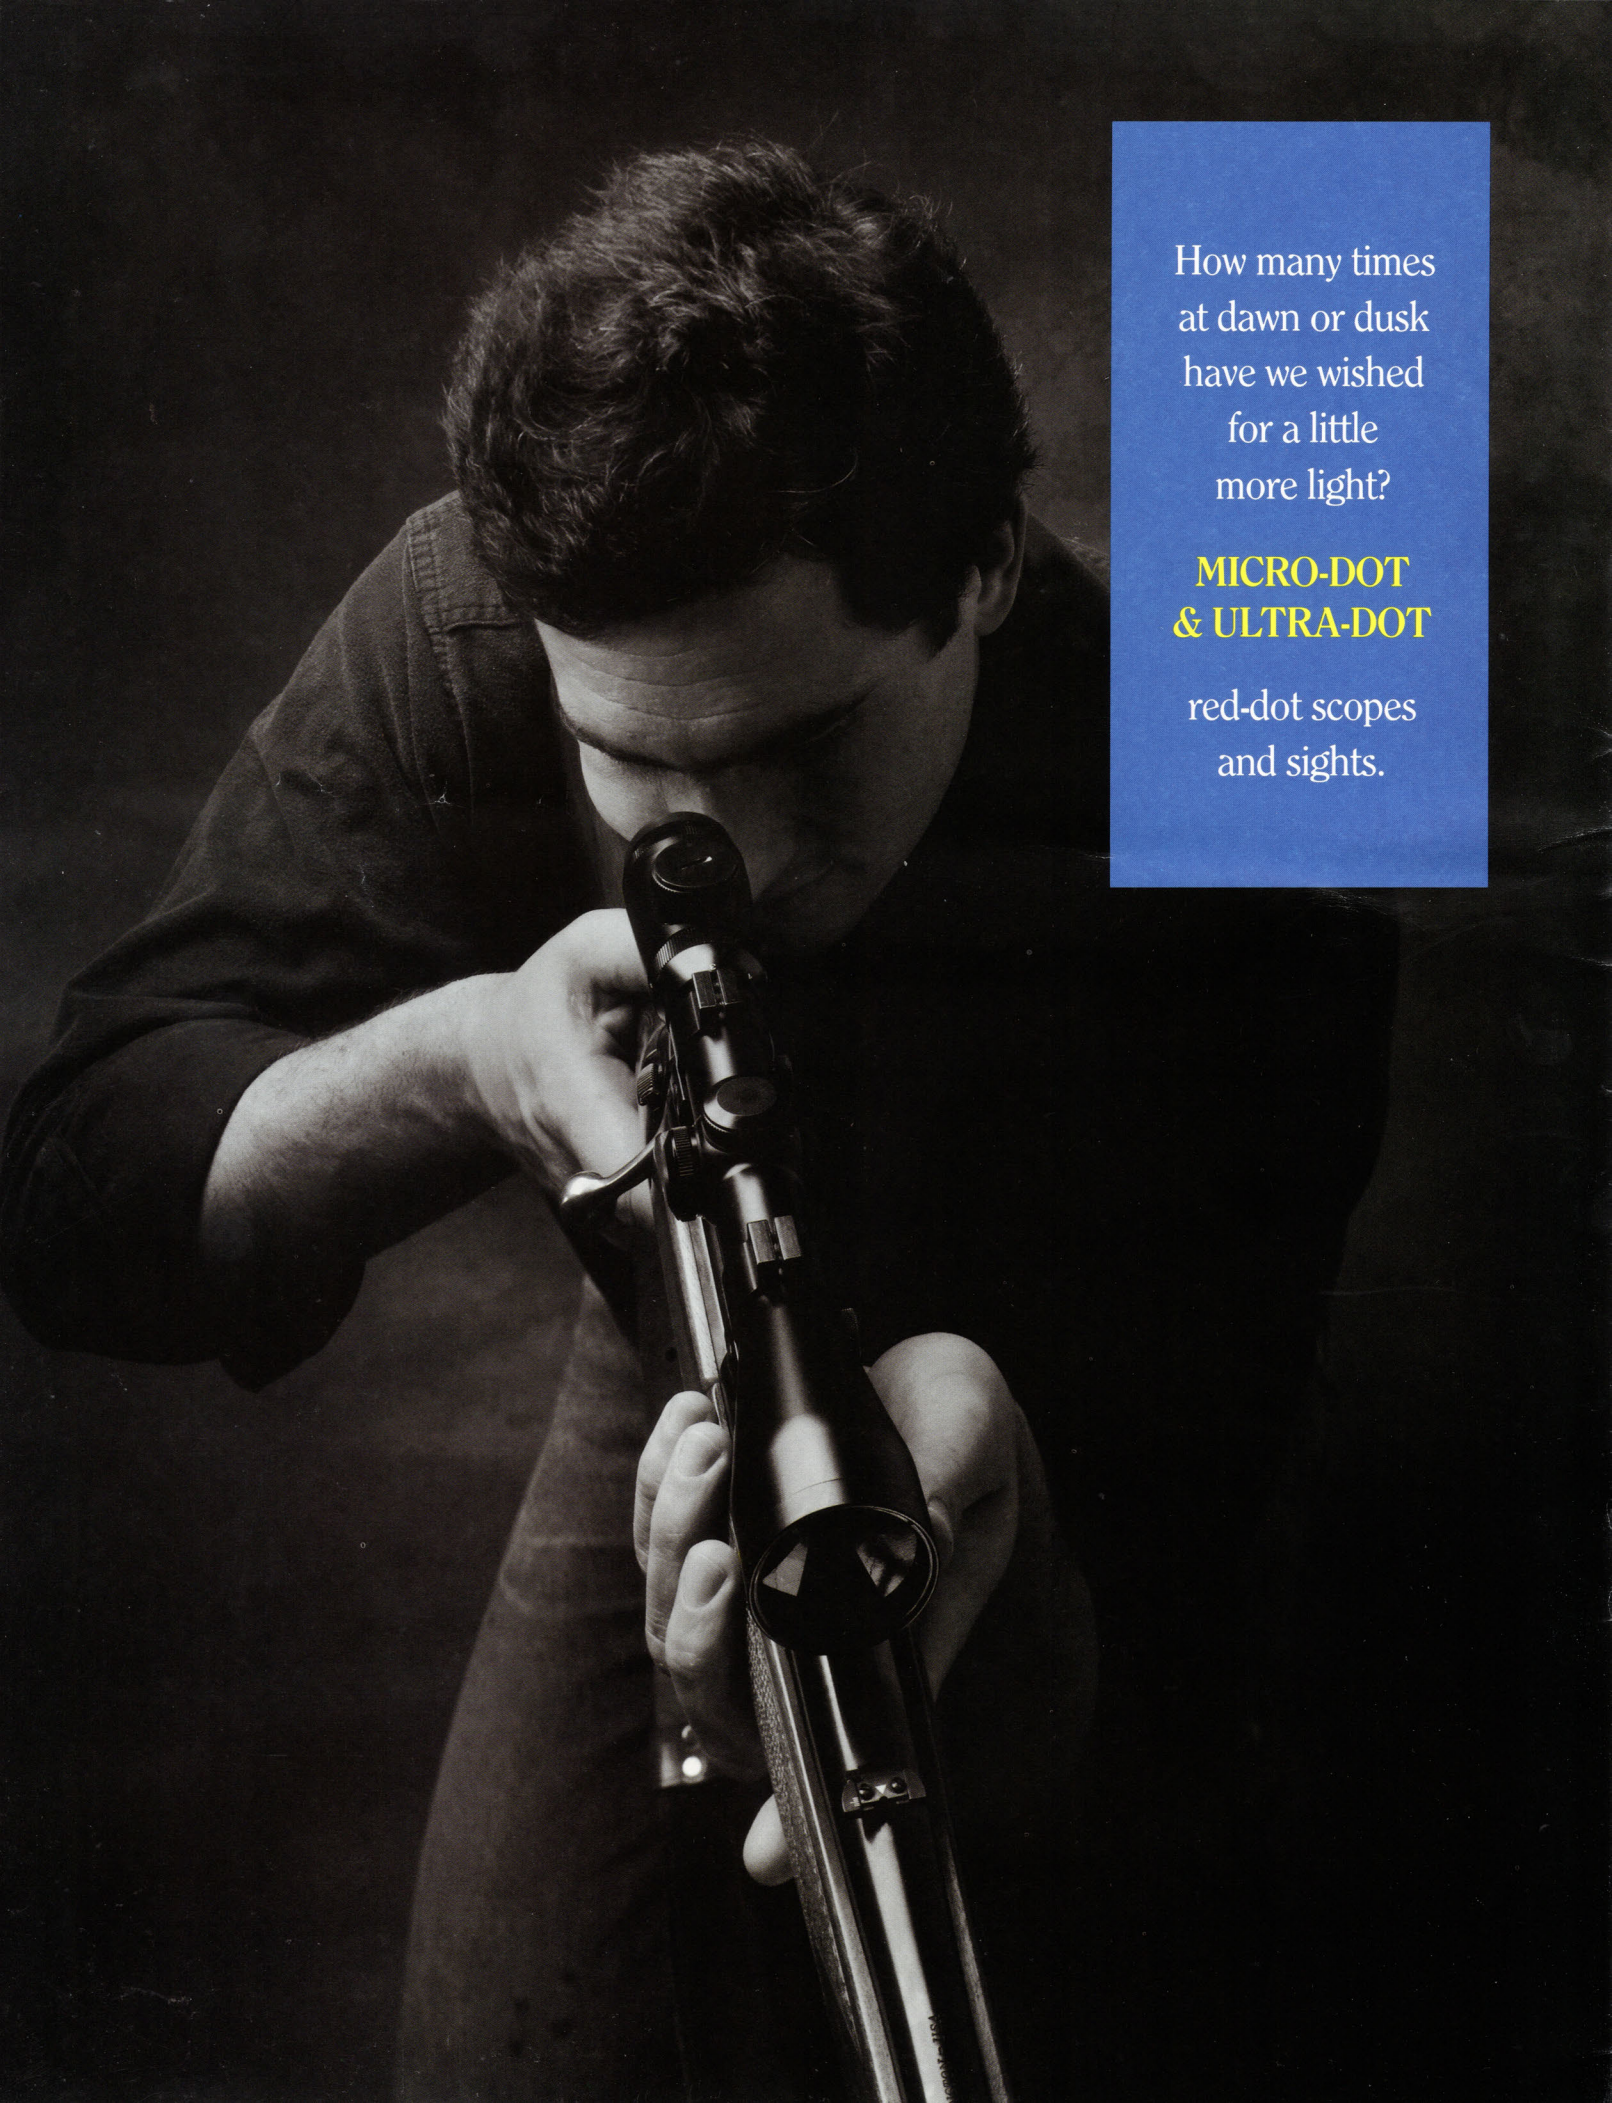
Chambered in either .223 or .308, the Model AR also has the same folding stock, milled receiver, gas system and barrel as the Model ARM.

The GALIL Sniper: built for unequalled accuracy.

In .308 only, each Sniper is hand built to exacting accuracy specifications. The few that are crafted each year reflect the incredible quality and precision of limited production.

The HADAR II: the high-tech hunting rifle.

Space age lines, walnut stock and a battle proven operating system: the HADAR II is a .308 hunting rifle for the hunter who demands rugged dependability.



How many times
at dawn or dusk
have we wished
for a little
more light?

MICRO-DOT
& ULTRA-DOT

red-dot scopes
and sights.

A New Generation In Sighting Equipment.

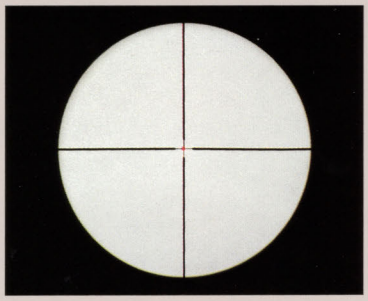
The most advanced electronic, red-dot aiming systems in both sights and scopes.

Experience in all forms of shooting gives Action Arms the perfect overview to design today's most advanced electronic, red-dot aiming systems: the Micro-Dot line of scopes and the Ultra-Dot Reflex sight.

Micro-Dot Scopes: red-dot aiming when the light gets bad and the hunting gets good.

The Micro-Dot's red aiming point lets the hunter aim with confidence, even when he can no longer see the crosshairs. Imagine, accurate aiming from the darkest opening morning to the last minute of the season.

In daylight, Micro-Dot scopes are like any other premium scope. The 1″, waterproof, one piece tube and coated optics let these scopes stand comparison to any conventional model. In all of the most popular variable ranges, the Micro-Dots cover every hunting need — including an extended eye relief model.



Micro-Dot Scopes put a ½ minute of angle red dot in the center of the crosshairs.

The Ultra-Dot Sight: so compact and lightweight that you'll wonder where the battery goes.

When it comes to red-dot reflex sights, smaller and lighter is better. The Ultra-Dot is lighter and more compact than the other "point" sight.

The Ultra-Dot incorporates its battery pack into the small, click-adjustable brightness control. With no projecting battery pack, it mounts easily with 1″ scope mounts on virtually any firearm.

The Ultra-Dot is so compact because the battery is contained in the click-adjustable brightness control.

Specifications

Timber Wolf

Operation: Locked breech
Safety System: Push-button on trigger guard
Ammunition: .357 Magnum & .38 Special
Sights: Front: fixed blade, Rear: adjustable. Integral scope mount on receiver.
Stock: Walnut
Finish: Blued metal
Barrel Length: 18.5 inches
Length — Overall: 36.5 inches
Weight — Unloaded: 5.5 lbs.
Magazine Capacity: 10 rds.

AT-88S

Operation: Locked breech; inertial firing pin
Safety System: Thumb safety: cocked & locked or double action, firing pin lock
Ammunition: 9mm & .41 Action Express
Sights: Front: fixed blade, Rear: drift adjustable
Stock: Checkered walnut
Finish: Blue or chrome
Barrel Length: 4.8 inches
Length — Overall: 8.1 inches
Weight — Unloaded: 35.3 oz.
Magazine: 9mm — 15 rd./ .41 A.E. — 10 rd.

AT-88P

Operation: Locked breech; inertial firing pin
Safety System: Thumb safety: cocked & locked or double action, firing pin lock
Ammunition: 9mm & .41 Action Express
Sights: Front: fixed blade, Rear: drift adjustable
Stock: Checkered walnut
Finish: Blue or chrome
Barrel Length: 3.7 inches
Length — Overall: 7.3 inches
Weight — Unloaded: 32.1 oz.
Magazine: 9mm — 13 rd./ .41 A.E. — 8 rd.

AT-88H

Operation: Locked breech; inertial firing pin
Safety System: Thumb safety: cocked & locked or double action, firing pin lock
Ammunition: 9mm & .41 Action Express
Sights: Front: fixed blade, Rear: drift adjustable
Stock: Walnut
Finish: Blue or chrome
Barrel Length: 3.5 inches
Length — Overall: 6.9 inches
Weight — Unloaded: 30.5 oz.
Magazine: 9mm — 10 rd./ .41 A.E. — 7 rd.

Micro-Dot Scopes & Ultra-Dot Sight
